Summary

The United Institute of Informatics Problems offers consumers services for developing a system for decryption objects on aerospace images under an outsourcing agreement and is looking for partners to conclude a distribution services agreement.

Description

Scope of application: Systems for monitoring objects on aerospace images of the earth's surface.

The system provides the following functions:

1. Automatic search in the database for images most similar to a given sample;
2. Output of 10-20 most similar (previously annotated) images to the operator to solve the identification problem.

Advantages and Innovations

It has no analogues in the CIS countries.

The main effects of the implementation are a significant increase in the speed and accuracy of solving problems of monitoring objects on aerospace images of the earth's surface.

Stage of development

Already on the market

Comments regarding stage of development

A prototype has been developed. A same of functionally similar software modules and blocks, developed earlier, were delivered as part of a large development to the Customer

Already engaged in transnational cooperation

Yes

Additional comments

United Institute of Informatics Problems of the National Academy of Sciences of Belarus is the leading organization in the Republic of Belarus for fundamental and applied research in the field of information technologies: design automation, applied mathematics, supercomputer technologies, bioinformatics and medical informatics, geographic information systems, digital cartography, information space technologies, Grid-technologies. The Institute is a provider of the scientific and educational Internet in Belarus, participates in the development of recommendations on the use of the results of scientific research, scientific support for informatization processes in the Republic of Belarus, the development of forecasts in the relevant fields of science and technology, and the training of highly qualified personnel.

Scientific directions:

- automation of engineering systems design;
- processing and recognition of signals, images, speech;
- geoinformation systems;
- input and output of video information;

- operations research and discrete optimization;
- data protection;
- decision-making in emergency situations;
- bio- and medical informatics;
- computer networks, databases and telematic applications;
- supercomputer technologies and parallel computing, Grid technologies;
- information and reference systems.

The strategic goal of the UIIP NAS of Belarus is the creation and implementation of systems developed on the basis of modern scientific theories and methods of information technology. At the same time, the main directions are the development and creation of high-performance systems and advanced technical base of network technologies based on the principles of GRID and cloud computing. Integration of high-performance computing resources of the institute into the European and world network will create conditions for the export of services to other countries. Another important export factor should be the computing complexes and systems created in the laboratories of the institute and designed as a finished hardware and/or software product. The areas of application of these products are automation of the full life cycle of products in industry and electronics, medical informatics, space information systems, information systems in management and government, public information services, and others.

Along with the expansion of scientific and technical cooperation with partners from the CIS countries, Western and Eastern Europe, much attention was paid to expanding the geography of scientific and technical cooperation and entering new markets for scientific and technical products (China, the countries of the Persian Gulf and a number of other countries).

The strategic goal of the implementation of international projects is to increase the competitiveness of domestic scientific and technical products, their promotion to the world market, the maximum attraction of foreign investment in the research sector of the Republic of Belarus.
